Actuator Service-Exchange Program

A unique advantage to Blackhawk piston pumps is longevity. Rather than discard a worn actuator, you can keep your downhole pumps pumping with Blackhawk's driver-reconditioning service.

Why Recondition:

- Significant cost savings – No onsite repair expense, no need to buy new.
- Highest quality work -- rebuilt to original factory specifications.

How It Works:

- Contact us first – we quote the low price and confirm shipping. Email pump.info@blackhawkco.com or call 630-469-4916.
- We send you a custom shipping container with return-label enclosed.
- Then: 1) dismount your above-grade actuator, 2) rotate in a reserve driver, and 3) pack and send your actuator to us by UPS (max two per case).
- We'll return the actuator to you in roughly two weeks.

What We Do:

- Inspect, disassemble, and deep clean your driver.
- Replace worn parts -- including seals, rings, and speed mufflers.
- (Hard metal & chrome-plated SS drive rod extra – we will contact you if needed.)
- Rebuild to factory standard.
- Run an in-lab 10-point performance check.
- Provide an inspection report and detailed repair log.
- Return your reconditioned driver in its case by UPS, a new return-label included.

A driver-rotation service-exchange schedule allows you to minimize downtime by always having a new actuator ready to swap into a well or sump when a driver is removed for servicing or refurbishing.

Blackhawk's above-grade actuators can be removed and mounted in minutes -- no pump pulling required.

Contact us for more. Our job is to make your job easier.
